Active Secret Level Security Clearance

SUMMARY

Ambitious and detail-oriented Software Engineer with a Master's Degree in Computer Science and a demonstrated history of enhancing system efficiency and scalability at Lockheed Martin. Proficient in C++, Python, Linux, and Git, with extensive experience in developing real-time systems and applications within agile frameworks. Scrum Master and adept at team coordination and leadership, driving a 20% increase in sprint completion rates. I hold an active Secret-Level security clearance valid until May 2026.

SKILLS & QUALIFICATIONS

C++, Java, Python, PyQt, Docker, Linux, UNIX, Git, SQL, UML, sysML, HTML, CSS, PHP, MySQL, OOP, Matlab, Nexus, Artifactory, CMake, Jira, Confluence, UI Development, Agile Development, Relational Databases, Algorithms, Data Structures, Cameo Systems Modeler, Face Standard Model, Scrum Master, Communication, Interpersonal Skills, Organization Skills, Strong Planner, Collaborative, CICD, Autonomy Planning, Algorithm Development, System Health and Monitoring, GUI Development

PROFESSIONAL EXPERIENCE

Software Engineer - Level 2 | Lockheed Martin

Aug 2022 - July 2024

- Managed MOSA Crewed/Uncrewed Teaming Mission Systems within a comprehensive software lifecycle environment (CICD), with a focus on autonomous planning and algorithm development using C++ in a virtual Linux environment.
- Served as Scrum Master, significantly enhancing the agile development team's sprint completion rate by 20% through the implementation of improved workflows and team engagement techniques.
- Developed an internal system health and monitoring GUI tool utilizing Python libraries which resulted in a 50% increase in mission system execution efficiency and a notable decrease in lab testing time.
- Architected project restructuring efforts that led to a 30% improvement in system design, thereby enhancing overall system performance and scalability.

Software Engineer Asc. | Lockheed Martin

Jan 2021 – Aug 2022

- Engineering, tested, and integrated over 100 real-time aircraft system software stories using C/C++, Python, Linux, Docker, Git, and Jira. Included detailed planning, coding, and validation to ensure high performance and reliability.
- Automated and streamlined deployment processes through advanced scripting and CI/CD practices, reducing setup time by 25% and enhancing project efficiency.
- Established robust interfaces and infrastructure with Docker and Linux, ensuring secure and efficient data flow, thereby improving system performance.
- Demonstrated strong problem-solving and debugging skills, effectively optimizing workflows and eliminating internal system malfunctions to ensure a stable development environment.

Software Engineering Intern | ICP Inc.

Mar 2020 – May 2020

- Specialized in software and OS imaging and configuration, enhancing over 500+ device setups and deployment processes.
- Improved system performance and customer satisfaction by promptly addressing and resolving software- and configuration-related issues.
- Collaborated with cross-functional teams to assure products meet all hardware and software requirements.

EDUCATION

Masters of Science in Computer Science | Stevens Institute of Technology

Expected Aug 2024

Bachelors of Science in Computer Science | College of Staten Island

May 2020

- ABET-Accredited: Computing Accreditation Commission
- Dean's List (2016 - 2020)

Leadership / Volunteer Activities

C.S Tutor / Volunteer

St. George Coptic Orthodox Church | February 2019 - Present

- Mentor students of several major programming topics relating to the study of data structures and algorithms in C++ and Java.
- Instructor, create interactive lesson plans to be taught weekly for college youth.
